Solutions:

IT Infrastructure Management & Networking :-

The network drives operational effectiveness, end user productivity and client satisfaction in today's business environment. As the backbone of your IT operations, your network infrastructure must provide reliable, secure support for converged data, wireless, real-time applications, virtualized data centres and more.

Combining the technologies, expertise and services necessary for your individual needs, We designs and deploy secure real-time network infrastructures built with long-term goals in mind. From assessments to strategy and implementation to management, We deliver assurance of a fine-tuned methodology that has been proven on hundreds of networks.

Discover how we can assist you in designing, deploying and managing Network Infrastructure solutions that drive results for your business.

We have built expertise and experience required to:

- Bring together voice, video and data seamlessly and securely over wired and wireless networks.
- Design and implement networking solutions that meet our customers' technical and business requirements, with a focus on maximizing ROI.
- Help our customers implement advanced applications to fully leverage the capabilities of their converged networking environments.

Security & Storage & Virtualization:-

- Vendor Independent Approach
- Focus on Reducing Cost, Mitigate Risk and Improve Productivity
- Areas of Focus include :
 - Storage Consolidation, Disaster Recovery, Data Protection Solutions, Archiving & Storage for Virtualization
- Consult and Design
 - Understand Business Requirements
 - Best practices assesment
 - Future Roadmap planning
- Build and Implement
 - RFP Design and Evaluation assistance
 - Build reference architectures
 - Implementation and Deployment
 - Knowledge Transfer & Process Documentation

Klickstart Business Solutions & Services

Mobile device management

Advanced Mobile Device Management combines traditional mobile device management capabilities with comprehensive security and app capabilities powered by the platform. The administrator can manage the lifecycle of the device and its apps, from registration to retirement, and quickly get mobile operations under control.

We have a formidable team with and expertise in the above area to help groom , enable , develop & Transform Startups & Mid-tier companies who are positioned to grow rapidly in a competitive market scenario.

Audits –

With the intention of helping companies in implementing and adhering to any of these International Standards, we have a suite of Consultancy services which include:

- ISO 27001 Services
- BCP/DR (BCMS) Services
- Compliance Management and Training

We also have a highly qualified team of auditors to scour your information security controls and identify weaknesses to help protect you from those that will cause trouble – attackers, forgetful or disgruntled employees, and yes, regulators.

We remain flexible in order to be able to better service our clients' needs...committed to your timetable, demands and sense of urgency.
In fact, our audit services would help in adding professional and economic value to your company.

We offer a comprehensive Information Systems Audit which includes the following audits as a part of it:

- ✚ Information Systems and Security Audit
- ✚ IT General Controls Audit
- ✚ Database Audit
- ✚ ERP Audit

Vulnerability Assessment and Network & Application Penetration Testing

- ✓ A comprehensive security audit of Applications, IT Infrastructure and Cloud Services. Complete assessment for external and internal attacks on the infrastructure and applications
- ✓ Unique 3 layered assessment approach that uncovers 60% more vulnerabilities when compared to competitors – Most companies carry out only automated assessment whereas we carry out Automated (usage of automated tools to find vulnerabilities), Semi-Automated (combination of automated and manual methods to create proof of concept exploits) and Manual (manual methods to determine expert level vulnerabilities and exploits - system specific weak points determined) assessments.
- ✓ Zero downtime of the client systems during assessment – regardless of the number of geographies
- ✓ Manual Assessment Suite comprising of techniques like Manual Fuzzing, Reverse Engineering, Simulated Code Analysis, Encryption Analysis and Cracking etc.
- ✓ Specialized services like Secure Code Review, Threat Modelling and Secure Architecture Design Review

Year Round Security Assessment:

- ✓ Overcomes loopholes present in current industry methods of security testing
- ✓ Overcomes the three main security gaps of the conventional approaches to Vulnerability Assessment (Time Gap, Consistency Gap, Dynamic Gap)
- ✓ Continuous, proactive and incremental assessment
- ✓ Is more effective and less expensive than carrying out 2 or 3 VA/PTs a year
- ✓ Ensures protection even against zero day threats
- ✓ Complete Business Impact Analysis carried out
- ✓ Comprehensive three layered assessments to report business impact of the discovered vulnerabilities and its remediation
- ✓ Customer specific Advisories for Continuous and Proactive updates on 0-days vulnerabilities provided throughout the year such that the vulnerabilities are fixed before the attacker community launches them

Cloud & Web based solutions & Services:-

ERP,

Web based ERP is a complete web based Accounting/ERP that requires only a web browser and PDF reader to use. It has a wide range of features suitable for many businesses, particularly distributed businesses in Wholesale and distribution. All processing is on the server and does not require any client installation.

Includes Account receivables, account payables, Inventory , Purchasing, banking, general ledger and manufacturing features with full material requirement planning with master production schedule/forecast , Maintenance and creation facilities.

CRM,

CRM On Demand is customer relationship management software that provides sales, marketing, and support teams with powerful tools to efficiently and effectively collaborate in providing the ideal customer experience.

Already includes everything that you need to scale operations! Start out with email marketing, sales, quotes and invoices. As your business evolves, use additional calendar and activity management, customer portals, reports, inventory management, project management, and other tools already included in your subscription.

Cloud IVR,

A suite of hosted voice applications for call tracking, call notifications, call forwarding, call automation and interactive voice response (IVR).

These technologies help businesses manage , measure and automate voice communications. We make Business Communication on Phone virtually accessible for companies to manage. Business Intelligence and reporting on phone calls now on your Finger Tip

Cloud Mail & Web security,

Web Security, IT security teams can instantly create and deploy granular web-based policies — by user, group, location or action — to anyone, anywhere and on any device. It's that easy!

- Best protection against today's advanced threats — in Real-time
- Secures Web 2.0 applications and social media
- Secures PCs, laptops, smart phones and tablet

Email Security, IT security teams can instantly create a comprehensive policy for security, anti-spam, mail flow management, and DLP — for anyone, anywhere and on any device. It's that easy!

- Secures inbound and outbound email from spam, viruses, web threats, botnets and advanced threats
- Secures sensitive information and files, safeguards privacy and enforces encryption to prevent data loss
- Mitigates denial-of-service attacks and attempts in the cloud

Cloud Backup

More than enterprise endpoint backup: Seamless group sync of files between users, easy sharing with outside parties over web, secure enterprise mobility with sync across endpoints and smart phones, mobile access and support for data in cloud apps. It's also the first in the industry to do encryption and de-duplication together at source! And, flexibility to choose between public cloud, private cloud and appliance solutions.

Cloud Archival

Cloud enables you to confidently address the challenges of email storage management, legal discovery, and regulatory compliance, with the ease and efficiency of a cloud-based service. With no hardware or software required, this solution frees up IT resources and provides users with rapid and secure access to archived email from their inbox, any supported web browser, smart phone or tablet

ITSM – IT Services Management

Cloud based ITSM , A next generation ITSM solution that delivers a comprehensive set of IT service management capabilities to improve service levels and productivity across the entire organization.

Through the tight integration of its change, incident, problem, and service request management processes around a common configuration management database (CMDB), Summus Service Management provides IT organizations with a highly efficient, effective, and dynamic mechanism for resolving incidents and problems, managing service level agreements (SLAs), and increasing end user satisfaction.

Cloud collaboration & Web meeting

Desktop sharing tool full of features to assist you in conducting the perfect online meeting or web conference.

Take advantage of the opportunity to share any screen content or application over the Internet in true color quality with up to 25 participants simultaneously, while still sitting at your desk.
